File Type Converter

A desktop app that converts images, data files and documents between formats.

Supported conversions

Category	From	To
Images	PNG, JPG, BMP, GIF, TIFF, WEBP, ICO	PNG, JPG, BMP, GIF, TIFF, WEBP, ICO, PDF
Data	CSV, TSV, XLSX, JSON	CSV, TSV, XLSX, JSON
Documents	TXT, MD, HTML	PDF
Documents	DOCX, DOC, RTF, ODT	PDF (needs Microsoft Word or LibreOffice)
PDF	PDF	TXT, DOCX (DOCX needs Microsoft Word)

Good to know

- **Transparency:** JPG, BMP and PDF can't store transparent pixels, so transparent areas become white.
- **Animated GIFs:** only the first frame is converted.
- **Icons (ICO):** non-square pictures are centred on a transparent square, and every standard icon size that fits (16 to 256 px) is included.
- **Excel files:** only the first sheet is converted.
- **JSON:** a list of objects becomes one row per object, and nested objects become columns like `owner.name`. JSON that isn't a list or an object (for example just a number) can't become a table.
- **Word documents → PDF** uses Microsoft Word when it's installed. Without Word, the free LibreOffice is used instead, if it's installed.
- **PDF → DOCX** is done by Word, which rebuilds the PDF as an editable document. Simple text PDFs come out well; complex layouts less so. It can take 20 seconds or more.
- **Scanned PDFs** (photos of pages) contain no text, so they can't become TXT or a useful DOCX.
- **CSV files** are saved so that Excel shows accented letters (é, ñ, ü) correctly. CSVs saved by older versions of Excel can be read too.
